Prime Care Technologies (PCT) was founded upon two guiding principles, provide exceptional customer care to forge long lasting relationships, and use technology to enhance and support the operations of the people and organizations it serves.

Prime Care Technologies is a hosting, ASP, and technology organization. The hosting business focuses on small to mid-size companies with revenues up to 1 billion or divisions of Fortune 500 and 1000 companies. Prime Care Technologies is also a Premier partner and reseller of Tarantella, which Web enables any application. iTivity™ is a perfect fit with Prime Care Technologies' Internet ASP Business Model. iTivity is a Web compatible solution that meets the privacy, security and cost demands that healthcare and commercial prospects expect.

As a leading wireless network integrator, ASP and hosting solution provider, Prime Care Technologies (www.PrimeCareTech.com) is always looking for the best products to meet their customer's needs. "Our customers need the ability to connect to any computer over the Internet without diminishing bandwidth or the security benefits of remote applications," says Jim Hoey, CEO and president of Prime Care Technologies. "We chose iTivity as the best product to support our hosted clients and to provide them with an additional tool for their own training."

iTivity fills a very important void in remote connectivity and support that existed for years. Everyone knew that the Internet was part of the remote equation, but not until it could be secured. Once secured with iTivity, the Internet provides administrators with unparalleled remote connectivity without the residual cost of third-party services such as WebEx and GoToMyPC. Better still, iTivity eliminates the need for VPNs, which can be messy and time consuming to implement. iTivity is a self-hosted solution that eliminates the monthly subscription fees of competing services. Not only is this less expensive, but it also increases privacy.
